AutoCAD: A well-known member of the family of Autodesk computer-aided design (CAD) and drafting software, the Autodesk Autodesk AutoCAD 2016 2019; Autodesk AutoCAD 2018 2019 was developed in 1985, and introduced in 1986. AutoCAD is an example of a type of application referred to as a Computer-aided design (CAD) or drafting software, and was one of the first commercially available computer-aided drafting (CAD) software programs. The program, which still runs on computer operating systems as Windows, Linux, and macOS, was originally designed as a desktop app on personal computers (PCs). With the advent of mobile computing and the rise of tablet computers, the Autodesk AutoCAD 2017 2018 software is also available as a web app. To run AutoCAD, a user will need to either purchase a licensing model, or use the product free of charge. The program is advertised on Autodesk's website as a "desktop solution". However, the Autodesk AutoCAD 2017 2018 software can also run on mobile and web platforms. At the time of AutoCAD's launch in 1986, there were only three other CAD programs for personal computers, and two of those were freeware: KDW-Freeware CAD (which in turn was a freeware version of InventCAD), and EAGLE. If a user purchases a license for AutoCAD, they can run the software on any Windows, macOS, or Unix operating system. AutoCAD software has been continually developed since 1986, with the most recent version, AutoCAD 2017 2018, being released on October 31, 2017. Licensing Because AutoCAD is used in design-intensive industries such as construction, manufacturing, and engineering, Autodesk charges a subscription-based license fee for the AutoCAD 2017 2018 software. AutoCAD is usually sold in packs of varying numbers of license codes, and those license codes can be shared amongst multiple computer users. In the typical model, a user licenses a copy of the program for a specified number of seats for a year. In this way, it is a subscription-based program, but one that is priced per seat rather than per machine. As such, it does not require licensing hardware on each machine. This is particularly useful for small to medium-sized companies, and for businesses that do not have or use

An evaluation of the nonhuman primate as a model for cutaneous wound healing. The cutaneous wound healing process was studied by quantitative histology in a group of 12 rhesus macaques. Animals were divided into two groups: one received no treatment (control), and the other received 1-cm2 split-thickness donor sites on the ventral abdominal skin. Three animals in the control group had their wounds dressed with sterile gauze on days 3-4, and the remaining nine animals served as untreated controls. After sacrifice on days 3, 4, 7, 10, and 14, histologic samples were taken for light and electron microscopy. In the skin specimens, the epidermis was the main site of active repair. Epidermal basal cell proliferation, migration, and differentiation were markedly retarded in the donor sites of the experimental animals. Fibroblasts were abundant in the early repair zones. By day 14, dermal remodeling occurred, and collagen and vascular endothelial cells were present at the dermal-epidermal junction. Epidermal-dermal junction maturation occurred at the periphery of the wound by day 14. The rate of healing was rapid, with animals in the experimental group showing complete healing within 14 days. Although a human skin equivalent does not exactly replicate the human in vivo wound repair process, this study indicates that the nonhuman primate is an excellent model for studying cutaneous wound healing.Q: CodeIgniter Active Record - Group by string Suppose I have a table "cities" city_id | name ---------------- 1 | Delhi 2 | Mumbai 3 | Bangalore 4 | Chennai If I run this in the codeign
