using the same combination of software and setup to create catalogs, bindings, covers, and table of contents for thousands of different publications. Printing of this type of product is done using the Postscript language. Postscript is a well known, industry-standard language for printing and in the past has been used for all professional level desktop publishing. However, its lack of standardization can make it a difficult and expensive language to learn, and it's not easily transferable to other print languages. Also, as a common language, it allows for interchangeability of data and page layouts across a wide range of applications and printers. In recent years, however, its use in simple, general purpose printing has increased. Programs like Filezilla have, in many cases, replaced the Postscript language with Portable Document Format (PDF), a cross platform and cross application file format. 3. Imaging and Digital cameras Many of us today take digital photographs and use them on our computers for photos, for documents, and for scanning and making hardcopy

copies of documents for archiving purposes. This is easy to do, and it is becoming more and more commonplace. Some people, however, take very few photographs and don't see the point in the expense of a digital camera. Regardless of the philosophy behind taking and storing your photos, there is a way to format them so that you can easily transfer the images to your computer. Once you have your images on your computer, you can use Adobe Photoshop,
