* The digital camera lets you take pictures with your phone or a digital camera. There are two types of cameras: • ****_Point-and-shoot cameras_**** enable you to take images and record video by pressing a button, using a dial or touch screen, or having a scene selected. The camera is easy to use with a basic set of controls and functions. • ****_SLR_**** (single-lens reflex) cameras allow you to take still images and video, change settings, and adjust color, contrast, and exposure. They include a built-in finder, metering, zoom lens, and many other controls. A variety of lenses are available for these cameras, and different cameras have different

controls, functions, and quality. As the quality of phones and DSLRs improves, more and more people are snapping pictures, but actually taking a good picture is harder than it was when film was the only option. When planning your next vacation, for example, you can make the argument that it's more convenient to take a digital picture and edit the picture in an editing program than to actually go on vacation. With today's smart phones, you can edit your pictures and upload them to a social networking page as you go. However, _it's important to make sure you are taking good pictures and not just snapping them and uploading them_. You don't want to use the same camera all the time. Getting pictures is only half the game. When you purchase a smart phone, you also need to think about accessories, and you need to test out the various apps and programs.

You also need to take the time to learn how to manage your pictures in a program like Photoshop. These functions should be considered before you buy your phone, just as you would buy any other accessory, as follows: * * * ## Digital Photography

Buy the best camera you can afford, whether it's a point-and-shoot or a DSLR. Take pictures at every opportunity. Use a device that has interchangeable lenses, if you can afford them. You will have more control over the quality of the lens and the optics you choose. Get good software to manage the quality of your pictures, including a device that can burn to DVD to store your pictures or copy them to computers. Figure out how to transfer pictures to your computer; it will save you hours of time. Check to see if you can use your

ADAMS AND BERNARD ADAMS, PLAINTIFFS-RESPONDENTS, V MEMORANDUM AND ORDER LAWRENCE G. KELLOGG, INDIVIDUALLY AND AS COLLECTOR OF TOWN OF EAST NORTHPORT, DEPUTY COLLECTOR OF TOWN OF EAST NORTHPORT AND AS DEPUTY COLLECTOR OF TOWN OF EAST NORTHPORT, DEFENDANT-APPELLANT, ET AL., DEFENDANT. Moving into the Internet of Things: fundamentals and further needs - ritvik ===== ritvik Seems like I have more to say in the next article: [inte...](things-second-round/) Q: Is it possible for Process.Start() to execute something in the local session if I call it

from an un-authenticated user? So, when I install the application the user has to enter a password before it can execute and I would like to avoid that. But I need this application to execute stuff on his local machine. So, I want to create a new process from a user that is not authenticated and use that new process to execute the same stuff but he'll get an error because the user won't have permissions. Any ideas? A: Yes, it is. You could instead only create the new session (process) when the user logs in, and do all the processing against this user. This would mean that any user who was not logged in will get an error message. Alternatively, you can use something like impersonation to take over the user's identity. I would advise against the first approach though, as impersonation is a dangerous thing. Depending on the kind of process you are using, you could try to use the credentials of the currently logged in user too, e.g. by using the `System.Security.Principal.WindowsIdentity.GetCurrent()` class method. // Licensed to the .NET Foundation under one or more agreements. // The .NET Foundation licenses this file
