Related software Microsoft Windows Most AutoCAD applications can be run on Windows Vista, Windows 7, Windows 8, Windows 10 or other recent versions of Microsoft Windows. AutoCAD File Compatibility mode AutoCAD-only applications often allow creation of drawings on any machine that runs Microsoft Windows, but only from a machine that runs AutoCAD. To do this, when opening a drawing or sending it to other programs, the user must first enter the Compatibility mode for AutoCAD. The name of this mode is "AutoCAD" and it can be started from the Start menu or Run dialog box. If the drawing is created by a non-AutoCAD application that contains a drawing format compatible with AutoCAD, the application will warn the user about the incompatibility. However, the drawing is always compatible with AutoCAD

even if it is created by a non-AutoCAD application. File formats AutoCAD supports and imports more than 30 file formats, including DXF, DWG, DWF, EMF, PDF, EPS, BMP, EPSV, SVG, TGA, TIFF, GIF, JPG, PCD, PLY, STL, CGM, IGES, DWF5, GDAL, IGES, PLY, OBJ, VRML and COLLADA. The file format of the drawing is usually detected during the import process and the file format name is displayed in the Status bar. The import process is automated and no user intervention is required. Some of the file formats listed above may also be used as the native format of the application (for example, AutoCAD LT for DWG). Some of the file formats listed above are also available through plugins, allowing their import and export functionality to be extended.

User Interface There are several ways to access the AutoCAD interface.

CAD Manager The CAD Manager, sometimes abbreviated to CMAN, provides a basic drawing environment, similar to that of AutoCAD LT. It was introduced in version 14 and was named CAD after a version of AutoCAD. It allows creating and modifying 2D and 3D drawings and the designer to view, open, print and save files.

Command Line Interface The Command Line Interface (CLI) allows the user to start the application and to view and modify the state of the application using text-based commands. This is the ca3bfb1094

What's New in the AutoCAD?

Markup Assist: Select any portion of a drawing by using a tracing style marker and create a “trim” mark that lets you close parts of your drawing without erasing its lines or commands. The trim mark’s lines remain in the drawing, ready to reconnect when you need them. (video: 1:26 min.) Coloring: Preview the colors you pick in a Markup Assistant context menu or color picker by applying them to the whole drawing before applying them to an individual layer. After that, you can choose to reuse the same colors, change them, or discard them. The same options apply to more than one layer. (video: 2:23 min.) Line/Polygon Tool: Select a line or polygon tool to draw a closed or open path, or an arc with optional rotation. You

can select an existing path or start with a freehand path, and rotate it in a few ways by using the drawing area's tools. (video: 2:00 min.) Zooming: A zoom in and out of drawings, making the drawing area small or large, depending on the layout of the drawing. A detailed walk-through demonstrates how to quickly zoom in and out by using the navigation tools, as well as using the Zoom dialog box and the Zoom Selection tool. (video: 1:30 min.) Quadrant Selection: Quickly create a selection of four different lines that form a quadrant, or two rectangles or two triangles that form a quadrant. You can create two different quadrants on the same layer or create the quadrant and then subdivide it to separate it into two parts on different layers. (video: 2:36 min.) Text Wrapping: A zoomed-in view of a Text Wrap glyph lets you create a text wrapping constraint that makes a line wrap around the edge of the text box, which could add text to the sides of a drawing. (video: 2:13 min.) Drawing Line and Text: As you draw, you can choose to stop the drawing or keep drawing another line or text, and you can do so in several ways. You can: Draw a line and then select its endpoint to keep drawing the line. Keep the line drawing active, select the endpoint, and then draw a second line, which is equivalent to starting over by erasing and then drawing
