Q: How to get callback on Connect timeout with Node.js + Rails application? I have an Express/Node app with Rails backend. In Node I want to periodically make an http get request to Rails. This http get request to rails fails because of slow connection. In case of timeout I want to perform some action in rails (i.e., alert user). I am using Node module socket.io. And I am wondering if there is a way to notify the node client when the connection to rails fails. How can I do this? Thank you. A: So socket.io supports two way communication with ruby at this time: (socket.connect(host, port, function (err, socket) { if (err) { console.log(err); } else { console.log(socket.handshake.saslProtocol) } socket.on('disconnect', function () { console.log('socket disconnected'); }); }); Or socket.connect(host, port, function (err, socket) { if (err) { console.log(err); } else { socket.broadcast.emit('some message', { message: 'test' }); } socket.on('disconnect', function () { console.log('socket disconnected'); }); }); Stillbirth: a guide for child health nurses. Q: What is the correct way to install a gem that has both a ruby and a ruby-dev dependency? On my development machine, which happens to be a virtual machine, I have a gem that has both a "ruby" and a "ruby-dev" dependency. I'd like to have the same version of the gem on my machines that I have on my dev machine. On my virtual machine, the gem works fine: \$ gem list *** LOCAL GEMS *** godlubber (1.1.4) On my physical machine, I'm getting this: \$ gem list *** LOCAL GEMS *** godlubber (1.1.5) Gem::InstallError: Specified 'ruby' is not installed. ...so it seems that it's pulling the wrong version of ruby. Is the Gemfile supposed to be outside of the project, or should it be inside the same directory as the project? I've tried moving the Gemfile to project/Gemfile and then executing: \$ bundle install ...but I don't understand why it's trying to look for ruby in the "ruby2.0" gem directory and not the "ruby2.0-dev" directory. I'm using rbenv to select the correct version of Ruby for each project. Thanks for any and all help! A: Make sure to do this: rbenv rehash gem install gem-name // Hide all elements except the first one \$(_this.options.mute? _this.options.elements.not.first() : _this.options.elements.first()).show(); // Stash the position before we reset things this.position = _this.getXy(_this.position); this.storedPosition = _this.position; // Reset everything that we changed _this.newPosition =
