I can't find Macur on the Republican candidates' websites, though — unlike other letters I've seen — she sent her letter to Donald Trump, Jeb Bush and Marco Rubio. Why? Because "I want each candidate to say it's time to have honest conversations, instead of saying, 'That's not my issue,' " she told me. The action itself was sparked by a report in the website ThinkProgress.org. A: Questions about which technical writing or publishing tools to use are off-topic on Writers Stack Exchange. If you can improve your first book, that's something you can bring to your local writers' group, and share at the local level. That's the way to learn. I'd like to not have to explicitly specify the classes that implement this interface. That being said, I am debugging a project that interfaces other code, so this would be great if I could just 'trace' the attributes and classes. Something like: How do I go about debugging my code and 'tracing' the code my project is calling? This is a.NET 3.5 C# project. The leakage of air from the interior is prevented for the most part by means of a filter element. Normally, such a filter element consists of a filter material which is held in a casing. The casing covers the filter material completely, including the underside thereof, so that outside air is prevented from entering into the filter element. In order to be able to access the filter material, it must be possible to open the casing. Normally, this casing is connected to the roof, the door sill or the floor, in order to hold the filter element and to prevent the filter element from being shaken out and to prevent outside air from entering into the filter element. Thus, the filter element can be opened only from outside. A flap which is affixed to a casing is then opened in order to access the filter element. DE 100 70 285 A1 discloses an apparatus for storing and retaining a filter element wherein an inner casing part is arranged in an outer casing part so that they are connected to one another by an opening piece. The opening piece is configured so as to enable a flow connection in order to permit a flow through a filter material into and out of the filter element. The filter element is attached in a stepped manner onto the upper side of the opening piece and the outer casing part. DE 20 2007 019 774 U1 describes an apparatus for storage and retention of a filter element wherein a filter material is arranged in an outer casing. The filter material is secured in a housing which is guided in the outer casing and is thereby held in the outer casing. The housing is secured in an inner casing in a slotted manner so that a flow connection can be established between the inner and the outer casing. DE 697 06 404 T2 describes a filter element wherein the casing is
